

The COVID-19 tests' average PPA/sensitivity is 95.7%, and NPA/specificity is 99.04%.

FDA Cleared First Point-of-Care Antibody(IgG/IgM) Test for COVID-19

IgG - These antibodies indicate that you may have had Covid-19 in the recent past and have developed antibodies that may protect you from future infection.

IgM - A positive IgM test indicates that you may have been infected and that your immune system has started responding to the virus.

For in vitro Diagnostic Use Only.

What does POC cleared mean?

This authorization means finger stick blood samples can now be tested in POC settings adhering to clinical protocols for testing.

Benefits:

- · Results in 15 minutes
- · High Accuracy
- · Easy to use
- · No equipment required

Why FDA cleared a Point-of-Care Antibody Test for COVID-19?

"Authorizing point-of-care serology tests will enable more timely and convenient results for individuals who want to understand if they have previously been infected with the virus that causes COVID-19," said FDA Commissioner Stephen M. Hahn, M.D.
